## MP Global Products Announces New Name for its Thermal Products Division – MP Global Thermal Packaging Products

---

Norfolk, NE, February 5, 2014 - MP Global Products, an innovative manufacturer of environmentally preferable products, is pleased to announce a new name for its thermal products division. The division previously known as ThermoPod Packaging Products is now known as **MP Global Thermal Packaging Products**. The change is in name only. The foam-free packaging – super insulated mailers and corrugated-box liners made from select, purified and flocked recycled enhanced cotton fibers – features the same specifications, testing, and certifications and delivers the same exemplary performance. The products are carefully engineered to protect shipments of all manner of temperature-sensitive payloads, ranging from fine foods and wine to medical, veterinary, pharma, and cosmetics.

The enhanced cotton materials are completely aerobic and anaerobically biodegradable in less than one year when in the presence of active microorganisms as verified by ASTM D-6400 biodistintegration testing and in accordance with the 2013 FTC Green Guidelines.

Going forward, MP Global Thermal Packaging Products is the cornerstone of branding efforts for all division products. The name change will affect product labeling, marketing, and advertising, online and in print, and will be reflected in a new web address, [www.ThermoMailer.com](http://www.ThermoMailer.com). “The new name heralds an exciting future for the division,” says Roger Borgman, the national sales manager. “We will continue to provide superior quality and customer service with our full line of products.”

### *About MP Global Products*

Headquartered in Norfolk, NE, MP Global Products L.L.C. has years of experience in manufacturing earth friendly products made from recycled cotton fibers diverted from landfill.
